

AERIFY PLUS

15-0-0

LIQUID SOIL AERATION & BIOSTIMULANT

Aerify Plus 15-0-0

Aerify Plus offers a proven method to improving soil structure without the challenges associated with physical core aeration. While an effective practice, core aeration generally only affects five to seven per cent of the overall surface area with each treatment. Alternatively, an Aerify Plus application will provide full coverage with less labour, less mess, less hassle, and typically with longer lasting effects.

The key ingredients in Aerify Plus have been shown to improve the soil's physical properties, which helps increase rootzone oxygen levels and allow for deeper penetration of water. Not only does this improved soil porosity encourage deeper rooting, it leads to healthier soil.

The added carbon content in Aerify Plus will further boost beneficial soil microbes which can help reduce thatch, improve nutrient and moisture uptake, and ultimately enhance the plants ability to withstand environmental stresses.
